## ⚠ WARNING

Do not premix other chemicals and sodium hypochlorite (liquid bleach).  
Mixing may cause hazardous gas to form.

## NOTICE

Required flowing water pressure to the dishmachine is 15-65 PSIG. If pressures higher than 65 PSIG are present, a pressure regulating valve must be installed in the water line to the dishmachine (by others).

Pressure gauge not required on pumped rinse machines.

Important: The chemical containers should be placed no higher than 24" above floor.

If chemical containers are to be placed in cabinet adjacent to machine, a 1/2" dia. hole is required in the cabinet to run chemical supply line.

Use only 6% or 8.4% sodium hypochlorite (liquid bleach) as sanitizing chemical to insure proper operation of dishmachine.

Certain materials, including silver plate, aluminum and pewter are attacked by sodium hypochlorite (liquid bleach). See instructional manual.

## NOTES:

- All vertical machine dimensions taken from floor may be increased by .875" or decreased by .375".
- Moist air escapes from the door. Use only moisture resistant materials adjacent to dishmachine sides and top.
- A vent hood is not recommended above the undercounter dishmachine since it does not produce excessive vapors.

## PLUMBING NOTES:

- Water hammer arrestor (meeting ASSE-1010 Standard or equivalent) to be supplied (by others) in common water supply line at service connection.
- Recommended water hardness to be 3 grains or less for best results.
- Ⓝ If drain hose is looped above a sink, the loop must not exceed 51" AFF.

## CONNECTION INFORMATION

(AFF = ABOVE FINISHED FLOOR)
